FOREWORD

This code of practice for labelling workplace chemicals is an approved code of practice under section 274 of the *Work Health and Safety Act* (WHS Act).

An approved code of practice is a practical guide to achieving the standards of health, safety and welfare required under the WHS Act and the Work Health and Safety (the WHS Regulations).

A code of practice applies to anyone who has a duty of care in the circumstances described in the code. In most cases, following an approved code of practice would achieve compliance with the health and safety duties in the WHS Act, in relation to the subject matter of the code. Like regulations, codes of practice deal with particular issues and do not cover all hazards or risks which may arise. The health and safety duties require duty holders to consider all risks associated with work, not only those for which regulations and codes of practice exist.

Codes of practice are admissible in court proceedings under the WHS Act and Regulations. Courts may regard a code of practice as evidence of what is known about a hazard, risk or control and may rely on the code in determining what is reasonably practicable in the circumstances to which the code relates.

The WHS Act and Regulations may be complied with by following another method, such as a technical or an industry standard, if it provides an equivalent or higher standard of work health and safety than the code.

An inspector may refer to an approved code of practice when issuing an improvement or prohibition notice.

This Code of Practice has been developed by Safe Work Australia as a model code of practice under the Council of Australian Governments' *Inter-Governmental Agreement for Regulatory and Operational Reform in Occupational Health and Safety* for adoption by the Commonwealth, state and territory governments.

A draft of this Code of Practice was released for public consultation on 7 December 2010 and was endorsed by the Workplace Relations Ministers Council on [to be completed].

How to use this code of practice

This Code includes references to both mandatory and non-mandatory actions. The references to legal requirements contained in the WHS Regulations (highlighted in text boxes in this Code) are not exhaustive and are included for context only.

The words 'must', 'requires' or 'mandatory' indicate that legal requirements exist, which must be complied with.

The word 'should' indicates a recommended course of action, while 'may' indicates an optional course of action.

PURPOSE

This Code provides practical guidance for persons who have duties under the WHS Regulations to correctly label hazardous chemicals used in the workplace.

SCOPE

This Code applies to substances, mixtures and articles used, handled or stored at the workplace which are defined as hazardous chemicals under the WHS Regulations.

While this Code applies to hazardous chemicals as defined, it is recommended practice to provide a label for any chemical that is suspected may be harmful to health, safety or the environment but has insufficient information generated to allow it to be correctly classified. The label should reflect current state of knowledge.

1. INTRODUCTION

1.1 Who should use this code of practice?

You should use this Code if you are a person conducting a business or undertaking and you manufacture, import, supply or use hazardous chemicals, because you have work health and safety duties to ensure that they are labelled in accordance with the requirements under the WHS Regulations.

This Code describes the type of information that is needed on labels for various hazardous chemicals so that users of these chemicals in workplaces can identify any hazards associated with the chemical and take appropriate steps to eliminate or minimise the risks.

1.2 The meaning of key terms and abbreviations

ADG Code means the *Australian Code for the Transport of Dangerous Goods by Road and Rail, 7th edition*, approved by the Australian Transport Council as in force from time to time.

Container means anything in or by which a hazardous chemical is, or has been, wholly or partly covered, enclosed or packed, including anything necessary for the container to perform its function as a container.

Hazardous chemical means any substance, mixture or article that satisfies the criteria of one or more *Globally Harmonised System of Classification and Labelling of Chemicals* (GHS) hazard classes (including a classification in schedule 7 of the WHS Regulations), is a dangerous goods under the ADG Code or is a C1 combustible liquid, but excludes a substance, mixture or article in the following hazard classes:

- acute toxicity - oral - category 5
- acute toxicity - dermal - category 5
- acute toxicity - inhalation - category 5
- skin corrosion/irritation - category 3
- serious eye damage/eye irritation - category 2B
- aspiration hazard - category 2
- flammable gas - category 2
- flammable liquids - category 4, except to the extent that the liquids are C1 combustible liquids
- acute hazard to the aquatic environment – categories 1, 2 and 3
- chronic hazard to the aquatic environment - categories 1, 2, 3 and 4, or
- hazardous to the ozone layer.

Label means the written, printed or graphical information elements concerning a hazardous chemical that is affixed to, printed on, or attached to the container of a hazardous chemical.

Further definitions and abbreviations used in this Code are listed in *Appendix A*.

1.3 What are the duties in relation to labelling hazardous chemicals?

The WHS Regulations apply specific duties to various persons in relation to the correct labelling of workplace hazardous chemicals. These duties are summarised below.

A person can have more than one duty and more than one person can concurrently have the same duty.

Duty holder	Responsibilities
Manufacturers and importers	<ul style="list-style-type: none"> • Ensure that the chemical is correctly labelled. • However, you may not need to relabel a hazardous chemical if it is a consumer product that retains its original label, and the chemical is only used in workplaces in household quantities and in a way that is incidental to the nature of the work activities undertaken by any worker who uses the chemical.
Suppliers	<ul style="list-style-type: none"> • Must not supply a hazardous chemical to a workplace if the supplier knows, or ought reasonably to know, that the chemical is not correctly labelled.
Person who is conducting a business or undertaking	<ul style="list-style-type: none"> • Ensure that any hazardous chemical that is used, handled or stored at the workplace is correctly labelled, in accordance with Schedule 9 of the WHS Regulations, except where: <ul style="list-style-type: none"> ○ the hazardous chemical is a consumer product, retaining its original label and only used in workplaces in household quantities and in a way that is incidental to the nature of the work, or ○ a hazardous chemical is in transit. • Ensure that a hazardous chemical is correctly labelled if the chemical is manufactured at the workplace; or transferred or decanted from the chemical's original container at the workplace. • Ensure, so far as reasonably practicable, that containers are correctly labelled while holding a hazardous chemical. • Ensure that containers that are labelled for holding a hazardous chemical are used only for the use, handling or storage of the hazardous chemical. • The above three duties do not apply if the hazardous chemical is used immediately after being put into the container and the container is thoroughly cleaned after the chemical has been used, handled or stored so it is in a condition it would be in if the container had never contained the chemical. • Ensure, so far as is reasonably practicable, that a hazardous chemical in pipe work is identified by a label, sign or another way on or near the pipe work.

To prepare a correct and accurate label for a hazardous chemical, you need to know the correct classification of the hazardous chemical. Under the WHS Regulations, manufacturers and importers of a substance, mixture or article have an obligation to correctly classify that substance, mixture or article.

2. LABELLING HAZARDOUS CHEMICALS – GENERAL INFORMATION

The [draft] WHS Regulations require that a hazardous chemical be correctly labelled with specific information. This Chapter deals with the complete set of labelling elements that should be included on a container.

In some situations it is not possible or reasonably practicable to legibly include all of the above information on a label. Reduced label requirements are permitted in such situations. Guidance on the label requirements for these and other special situations is provided in Chapter 0 of this Code.

2.1 What information must be included on a label?

Under the [draft] WHS Regulations a hazardous chemical is correctly labelled if the chemical is packed in a container that has a label in English and includes the following:

- the product identifier
- the proper shipping name and UN number if the chemical is a dangerous goods and the ADG code requires the label to include the proper shipping name and UN number
- the name, Australian address and business telephone number of either the Australian importer or manufacturer
- the identity and proportion disclosed, in accordance with schedule 8 of the WHS Regulations, for each chemical ingredient
- any hazard pictogram consistent with the correct classification of the chemical or a class label that complies with the ADG Code
- any hazard statement, signal word and precautionary statement that is consistent with the correct classification of the chemical
- any information about the hazards, first aid and emergency procedures relevant to the chemical, which are not otherwise included in the hazard statement or precautionary statement, and
- the expiry date of the chemical, if applicable.

You may include additional information on the label provided that it is consistent with the intrinsic health, physical and environmental hazards of the hazardous chemical, and it does not contradict or cast doubt on any other information that is required on the label. This includes any information on hazards, first aid and emergency procedures that are relevant to the specific hazardous chemical, and are not otherwise covered by the hazard and precautionary statements.

The following additional information may also be included on the label, where relevant:

- an emergency phone number, such as for specific poisons or treatment advice
- the overseas name, address and telephone number of the manufacturer or supplier
- a valid website or internet address,
- reference to the Safety Data Sheet such as a statement on the label that says: 'Additional information is listed in the Safety Data Sheet'.

2.2 Product identifier, including details of ingredients

Information on the identity of a product includes a product identifier and the disclosure of certain ingredients. The product identifier and details of ingredients should be grouped together and located at the most prominent position on the label, for example at the top or centre of the label, or on a front panel.

A product identifier is a unique name or number by which the chemical is to be known, and which allows the product users to identify the hazardous chemical. The product identifier must be the same as that listed in the Safety Data Sheet, and may be identical to the trade name.

For those hazardous chemicals covered by the *ADG Code*, the proper shipping name and UN number must be included on the label, unless this information is not required by the *ADG Code*¹. A proper shipping name may be used as the product identifier providing the hazardous chemical is able to be uniquely identified.

A label must identify those ingredients, including their proportions, which contribute to the overall hazard class and hazard category of the hazardous chemical in accordance with schedule 8 of the *WHS Regulations*. Disclosure of ingredient names is not required for ingredients that meet only physicochemical and/or environmental hazard classifications.

For pure substances, the identity of an ingredient can be identical to the product identifier.

The identity of a hazardous ingredient must be disclosed on a label using its *chemical identity*, unless the use of a generic name is permitted. The chemical identity of the hazardous ingredient can be disclosed by the following:

- the IUPAC name, or
- the CAS name, or
- the technical name (if different from the IUPAC or CAS name), which must be generally used in commerce, regulations and codes to identify a substance or mixture, and recognised by the scientific community.

A generic name may be used to describe a hazardous ingredient if:

- the identity of the ingredient is commercially confidential, and
- an exposure standard has not been established for the ingredient, and
- the hazardous ingredient meets the criteria for any of the following GHS hazard categories, and no other GHS hazard classes or categories:
 - i) acute toxicity - category 4 (oral, dermal, inhalation), and/or
 - ii) aspiration hazard (category 1), and/or
 - iii) serious eye damage/ eye irritation (category 2A), and/or
 - iv) skin corrosion/irritation (category 2), and/or
 - v) specific organ toxicity (single exposure) (category 3).

A guide for selecting generic names for ingredients is included in *Appendix B* of this Code.

For complex mixtures

The identity of all hazardous ingredients in a complex mixture must be determined. In some situations it may be difficult to identify individual ingredients such as in natural products or extracts where the chemical composition of the mixture may vary according to the source. In these circumstances, technical names may be used to identify hazardous ingredients.

The ingredient and formulation details for hazardous complex mixtures must include as much information as possible. Chemical classes should be distinguished wherever possible. Chemical classes that may be used to represent a mixture of ingredients in complex mixtures include aliphatic hydrocarbons, aromatic hydrocarbons, aliphatic alcohols, aliphatic phenols and silicates.

Disclosing proportions of ingredients

The proportion of a disclosed ingredient, expressed as a weight or volume percentage of the hazardous chemicals must be described as an exact proportion, unless the exact concentration of an ingredient is commercially confidential. For multiple ingredients, proportions should be listed in descending order by mass or volume.

Where the proportions of ingredients in the hazardous chemical are commercially confidential, the

¹ The *ADG Code* allows some information to be omitted from package markings where the quantity of dangerous goods in the package is below certain quantity limits or where special provisions apply.

following ranges—or a narrower range as described in the paragraph immediately below—must be used as an alternative to disclosing exact proportions:

<10%; 10 - <30%; 30 - 60%; >60%

The proportion of an ingredient may be disclosed using a narrower range than the applicable range listed above. For example, for an ingredient present at 35% a range of 30 - 40% may be used instead of 30 - 60%.

For complex mixtures, proportion ranges should be used to cover any variability in the composition. Where the exact composition of a complex mixture is not known, this should be clearly indicated on the label.

Where possible, the percentage composition should add up to or indicate a total of 100%, even if an estimate of non-hazardous ingredients needs to be provided.

Example of how ingredients can be represented on the subsection of a label

Flammable Liquid A contains the following ingredients:

Toluene	55 %
Ethyl methyl ketone	40 %
Methanol	3.5 %
2-butanol	1 %
Xylene	0.5 %

As both xylene and 2-butanol are not hazardous to health at these concentrations, they do not need to be disclosed in the ingredients subsection of the label.

The ingredients and their proportions may be disclosed on the label using the exact proportions:

Flammable Liquid A, contains:

Toluene	55 %
Ethyl methyl ketone	40 %
Methanol	3.5 %

If the ingredient proportions are commercial-in-confidence, they may be disclosed on the label using a range:

Flammable Liquid A, contains:

Toluene	30 - 60 %
Ethyl methyl ketone	30 - 60%
Methanol	<10 %

2.3 Manufacturer/supplier/importer information

The label must include the Australian contact details of the manufacturer or importer, so long as the importer is resident in Australia.

Additional information, including details of an overseas manufacturer or supplier, such as a website or internet address, may be included on the label.

The supplier identification may be provided in a less-prominent position of the label, such as the back portion of the label. It should be grouped with the expiry date, where applicable.

2.4 Label elements

The combination of label elements required on the label of a hazardous chemical is directly linked to its hazard classification. Label elements apply to classification endpoints or hazard categories and must be determined as specified in the GHS.

Appendix C includes tables listing all the elements that apply to each hazard class and category or division.

The potential exists for duplication or redundancy of certain label elements where a hazardous chemical meets the criteria for more than one hazard class or category in the GHS. Duplicate or redundant information should not be included on a label. Rules of precedence of certain label elements and general guidance that should be used to determine when elements may be omitted from a label are provided in *Appendix F*.

Some hazardous chemicals, such as dangerous goods which cannot otherwise be classified into any hazard class described in the GHS, will not have any corresponding label elements. For these hazardous chemicals, hazard pictograms, hazard statements, signal words and precautionary statements cannot be included on the label. The labels for these products should include information on the hazards and safety precautions, for example, information on ignition sources.

The signal word, hazard pictograms and hazard statements should be grouped together in a prominent position on the label, and located either immediately following, or adjacent to the product identifier and chemical ingredients.

Signal words

Signal words are used to indicate the relative level of severity of a hazard. The GHS uses 'Danger' and 'Warning' as signal words. 'Danger' is used for the more severe or a significant hazard, while 'Warning' is used for the less severe hazards.

Only one signal word should be present on any one label. If the signal word 'Danger' applies, then the signal word 'Warning' should not appear on the label.

Signal words should be represented in bold and uppercase text.

Hazard statements

Hazard statements describe the nature of a hazard, including, where appropriate, the degree of hazard. A unique hazard statement is assigned to each hazard class and category. The hazard statements and corresponding hazard class and category are provided in *Appendix C*. All relevant hazard statements must appear on the label.

Additionally, *Appendix C* lists 12 Non-GHS hazard statements

A unique hazard statement code is assigned to each hazard statement. The hazard statement code is intended to be used for reference purposes only. It is not part of the hazard statement and should not be used to replace it or be included on the label.

Hazard statements should be represented in bold and sentence case text.

Precautionary statements

Precautionary statements describe the recommended measures that should be taken to minimise or prevent adverse effects resulting from exposure, or improper storage or handling of a hazardous chemical. Precautionary statements are assigned to each hazard class and category.

Precautionary statements are separated into five categories:

- *Prevention statements* refer to precautions to be taken to prevent an accident or exposure
- *Response statements* refer to instructions in case of an accident
- *Storage statements* refer to instructions for safe storage of the chemical

- *Disposal statements* refer to appropriate disposal instructions
- *General statements* for use as appropriate

The precautionary statements that correspond to each hazard class and category are provided in *Appendix C*. All precautionary statements relating to a particular hazard classification should be used. Redundant information may be omitted. Where a hazard classification results in duplicate precautionary statements, the information should only appear once, in line with the rules of precedence outlined in *Appendix F*.

A combination of precautionary statements may be used to save label space, improve readability and to provide flexibility in the application of precautionary phrases.

Related precautionary statements should be grouped together on a label to allow for ease of location. Precautionary statements should be printed in sentence case text.

A unique precautionary statement code is assigned to each precautionary statement. The precautionary statement code is intended to be used for reference purposes only. It is not part of the precautionary statement and should not be used to replace it or be included on the label.

The general precautionary statements refer to general precautionary measures to be taken, for example:

- If medical advice is needed, have product container or label at hand.
- Keep out of reach of children.
- Read label before use.

Unlike other precautionary statements, the general precautionary statements are not linked to particular hazard classes or categories and their inclusion on labels of workplace hazardous chemicals is not mandatory.

Where general precautionary statements are used, they should be located in a prominent position on the label, for example, adjacent to the product identifier. General precautionary statements should be printed in sentence case text.

Hazard pictograms

The GHS specifies nine hazard pictograms, having regard to physical, health and environmental hazards. These are provided in *Appendix D* of this Code.

Hazard pictograms must be included on the label in most cases. In some circumstances however, pictograms may be omitted from the label in line with the rules of precedence outlined in *Appendix F*. In all other cases, where pictograms are required, all the relevant hazard pictograms must be included on the label.

Hazard pictograms should be in the shape of a square set at an angle of 45° (i.e. diamond-shaped) on its point. The hazard pictograms should have a black symbol on a white background with a red border or frame of sufficient width to be clearly visible.

Class labels recommended for the transport of dangerous goods as specified in the ADG Code may be used instead of the relevant hazard pictograms specified in the GHS. Never use both in the same label. A comparison of the hazard pictograms as specified in the GHS and the ADG Code class labels are shown in *Appendix E*².

² GHS and Transport of Dangerous Goods pictograms can be downloaded from the GHS website at www.unece.org/trans/danger/publi/ghs/pictograms.html or via the GHS homepage at www.unece.org/trans/danger/publi/ghs/ghs_welcome_e.html.

2.5 Expiry Date

The expiry date for a chemical must be provided, where, for example, degradation or decomposition of the chemical may occur over time, with the result that the chemical is no longer within acceptable specifications for potency and stability.

An expiry date may be provided in a less prominent position of the label, such as the back portion of the label. It should be grouped with any supplier identification information. An expiry date should be represented in sentence case text. A checklist for the preparation of a label is provided in *Appendix G*.

3. SPECIAL LABELLING SITUATIONS

This Chapter outlines requirements and guidelines for labelling hazardous chemicals in special situations where the full requirements do not apply. You should always aim to provide as much information on the hazards and safe use of the chemical on the label as possible.

Under the WHS Regulations, reduced labelling is permitted for hazardous chemicals that are:

- supplied in small containers
- research chemicals or samples for analysis
- decanted or transferred
- not supplied to another workplace, and where the hazards are known to the workers using the chemical
- hazardous wastes, and
- classified into the explosives hazard class and are not explosive articles.

This section also provides guidance on the acceptability of labels prepared in accordance with other labelling systems and handled in a workplace, specifically:

- hazardous chemicals classified in the explosive hazard class and labelled in compliance with the Australian Explosives Code (AEC)
- dangerous goods labelled in compliance with transport requirements³
- consumer products, and
- agricultural or veterinary chemical products that are labelled in accordance with the requirements of the Australian Pesticides and Veterinary Medicines Authority.

3.1 Small containers

The [draft] WHS Regulations require that where a hazardous chemical is packaged in a container that is too small to attach a label with information that is required of hazardous chemical labels in general, then the label must be written in English and include the following:

- the product identifier
- the name, Australian address and business telephone number of either the manufacturer or importer
- a hazard pictogram and hazard statement that is consistent with the correct classification of the chemical, and
- any other information required for hazardous chemicals labels in general that is reasonably practicable to include.

In addition to the mandatory items mentioned above, labels for small containers or packages must include as much labelling information required for hazardous chemical labels in general that is reasonably practicable to include. Priority should be given to the inclusion of those labelling elements relating to the most significant hazards of the hazardous chemical.

The most significant hazard will vary from chemical to chemical, and will be dependent upon, for example, likely routes of exposure based on its physical state (i.e. whether it is a gas, liquid or solid), its packaging and its intended use.

³ Dangerous goods that are labelled to comply with transport requirements and are stored in a workplace may also need to comply with requirements as specified in the *Australian Code for the Transport of Dangerous Goods by Road and Rail* (ADG Code).

Examples of the most significant hazard

- The information relating to a hazardous chemical's inhalation hazard properties may be considered most significant for a paint that is intended for application using a spray gun, but not where it is intended for application using a brush.
- The information relating to dermal toxicity may be considered most significant for a veterinary pharmaceutical product that is intended for injection, and is packaged in an ampoule (i.e. where spillage could occur during opening), but not where the product is packaged in a ready-to-use syringe.

For hazardous chemicals with multiple hazard categories, the most stringent set of precautionary statements should be selected. This is appropriate for situations where rapid action or response may be crucial following accidental exposure, and therefore, information relating to these actions should be included in preference to non-critical information.

Example of the most stringent set of precautionary statements

- If a chemical can cause long term systemic effects, and is also acutely toxic, then the first aid measures for acute toxicity will normally take precedence over those for longer term effects. However, medical attention to the delayed health effects may be required in some cases of incidental exposure, even if it is not associated with immediate symptoms of intoxication. Therefore, the information relevant to medical attention that is required due to delayed health effects may be applicable.

Where certain hazard or other information has been omitted from the label, then it is recommended that alternative means for communicating the information should be used. The complete set of hazard and other information may be included on an outer box (such as for a box containing several very small ampoules), a swing tag or insert, or a leaflet inside a box.

Examples of acceptable labels for small containers are provided in *Appendix H*.

3.2 Research chemicals or samples for analysis

A research chemical is a substance or mixture that has been manufactured in a laboratory for the purposes of genuine research and which is not for use or supply to others for a purpose other than genuine analysis or research. A chemical that is supplied commercially to another workplace is not included under the meaning of research chemical or samples for analysis under any circumstances.

The [draft] WHS Regulations require that where a hazardous chemical is used for research purposes only, or is a sample for analysis, then the label must, at a minimum, be written in English and include the product identifier and a hazard pictogram and hazard statement that is consistent with the correct classification of the chemical.

A research chemical or sample for analysis must be correctly classified and the identity of the substance or mixture must be determined.

The product identifier of a research chemical or sample for analysis may be:

- the actual name of the chemical, or
- a recognised abbreviation or acronym, or
- a chemical formula, structure or reaction components.

Where a research chemical or sample for analysis cannot be identified this should be indicated clearly on the label. Labels for research chemicals or samples for analysis should include as much hazard information as possible, based on the identity and the known or suspected hazards.

Where labelling the actual laboratory container is impractical due to its size or the conditions under which it is used, other methods of providing the information can be used, such as a secure swing tag or labelling an outer container.

3.3 Decanted or transferred substances

The [draft] WHS Regulations require, where a hazardous chemical has been decanted or transferred from the container in which it was packed and it will not be used immediately or it is supplied to someone else, then the label must be written in English and, at a minimum, include the following:

- the product identifier, and
- a hazard pictogram and hazard statement that are consistent with the correct classification of the chemical.

For the purposes of this Code, *decant* means to transfer a substance from a correctly labelled container to another container within a workplace. Such a container may range from a small flask in a research laboratory to a large vessel that is used to contain reaction components prior to use in a pharmaceutical formulation process.

Where the entire amount of a decanted hazardous chemical will be consumed immediately, labelling of its container is not required.

A decanted substance can only be considered to be consumed immediately in situations where:

- it is not left unattended by the person who decanted it, and
- the decanted substance is not dispensed for the use of another person who is not immediately present at that time, and
- the decanted substance is used only by the person who oversees the decanting process, and
- the container is subsequently rendered free from any hazardous chemical immediately after use, so the container is in the condition it would be in if it had never contained the chemical.

Examples

- A sample of hydrocarbon solvent is dispensed from a bulk container into a 15 L container by Worker A. All of the decanted hydrocarbon solvent in the 15 L container is then consumed immediately by Worker A in the same shift. No hydrocarbon solvent is left in the 15 L container. The container with the dispensed solvent is not left unattended by Worker A before it is consumed.

In this example, the decanted hydrocarbon solvent is considered to be consumed immediately.

- A sample of hydrocarbon solvent is dispensed from a bulk container into a 15 L container by Worker A. The solvent in the 15 L container is not completely consumed by Worker A at the end of his/her work shift. Worker A has not left the container with the dispensed solvent unattended during the shift. The remainder of the solvent is left for Worker B.

In this example, the decanted hydrocarbon solvent is not considered to be consumed immediately.

Where a container is repeatedly used for decanting as part of normal work procedures or processes, a permanent label with all the general labelling information must be attached to the container. Permanently labelled containers must not be used to contain any other substances than that specified on the label.

3.4 Substances with known hazards that are not supplied to another workplace

The [draft] WHS Regulations require that if a hazardous chemical is not being supplied to another workplace and the hazards associated with the chemical are known to the workers involved in using, handling or storing the chemical, then the label must be written in English and, at a minimum, include the following:

- the product identifier, and
- a hazard pictogram and hazard statement that are consistent with the correct classification of the chemical.

Where a hazardous chemical will not be supplied to another workplace, and your workers involved in its handling have sufficient knowledge of the associated hazards, then you may omit some of the information normally required in a label. The label should communicate enough information on the hazards as necessary to ensure its safe use.

Examples of labelling chemicals that are not supplied to another workplace

- Hazardous Chemical A is manufactured at Site A. Batch samples of Hazardous Chemical A are routinely sent to a laboratory at the same manufacturing site for analysis. Samples of Hazardous Chemical A are handled on a regular basis at the on-site laboratory, and the hazards are well-known by the workers. Reduced labelling is permitted for the batch samples.
- Active Constituent A is manufactured at Site A, and then later formulated into an end-use product, Agricultural Chemical Product A. The end-use product is formulated at the same facility, Site A, where the active ingredient is manufactured, and the workers undertaking the formulation step are aware of the hazards. In this case, the reduced labelling is permitted for Active Constituent A. However, Agricultural Chemical Product A must be labelled with all requisite labelling information.
- From the previous example, if Active Constituent A is transported to a different facility, Site B, for formulation into the end-use product Agricultural Chemical Product A, even where both facilities are owned and operated by the same company, Active Constituent A must be labelled with all requisite labelling information.

3.5 Hazardous waste products

Hazardous waste products must be identified and correctly classified.

The [draft] WHS Regulations require that if it is reasonably likely that a waste product is a hazardous chemical, then the label on the container of the hazardous waste must be written in English and, at a minimum, include the following:

- the product identifier
- the name, Australian address and business telephone number of the manufacturer, supplier or, so long as it is an Australian resident, the importer, and
- a hazard pictogram and hazard statement that are consistent with the correct classification of the chemical.

The product identifier should reflect the nature of the waste as closely as possible and may depend on the extent of knowledge about the components of the waste. Examples of product identifiers may include:

- chlorinated solvent waste
- flammable waste
- chromium VI waste, and
- heavy metal waste.

Labels for hazardous wastes should include as much hazard information as reasonably practicable based on what is known about the identity and any suspected hazards. The label of any hazardous wastes should also include, where possible, the following information:

- the identity of any known or likely hazardous constituents or impurities and their proportions (for example, 'contains chromium VI, 5%', or 'may contain trace levels organic peroxides'),
- relevant precautionary statements,
- relevant first aid and safety directions, and
- any other information that may assist identification of the hazardous waste and its associated hazards.

3.6 Hazardous chemicals classified in the explosive hazard class

The [draft] WHS Regulations require that if a hazardous chemical may be classified in the explosives hazard class and is not an explosive article, the chemical must be packed in a container that has a label that is written in English, complies with the Australian Code for the Transport of Explosives by Road and Rail and includes the following:

- the proper shipping name and UN number of the chemical, and
- any hazard pictogram, any hazard statement and any precautionary statement that are consistent with the correct classification of the chemical in relation to health hazards.

The *Australian Code for the Transport of Explosives by Road and Rail* (Explosives Code) outlines requirements for labelling of explosives hazard class. This labelling regime is designed primarily for the communication of physical hazards of explosives during their transport.

Hazardous chemicals in the explosives class that meet the criteria for health hazards may require health and safety information on labels in addition to that required by the Explosives Code to meet workplace requirements.

Information on health hazards is not required on labels of explosives articles. Explosive articles should be labelled in accordance with the Explosives Code. However, where exposure to substances and mixtures within an article could occur during handling, any relevant health information should be included on labels.

3.7 Hazardous chemicals that are dangerous goods packaged for transport

Where a hazardous chemical has been packaged and labelled in accordance with dangerous goods transport requirements and is in-transit, then the hazardous chemical is not subject to workplace labelling requirements. Where workplace hazardous chemicals are not in-transit, they must be labelled with all of the required labelling information.

Hazardous chemicals that are classified as dangerous goods and transported by road or rail must comply with the labelling or marking requirements that are specified in the ADG Code. Transport markings and class labels of the ADG Code are designed primarily to assist emergency services personnel in case of an accident or emergency.

Note that the ADG Code refers to dangerous goods pictograms as Class or Division labels. Other information required on a package or container is referred to as markings. The size and colour of labels and markings required for transport are specified in the ADG Code.

The ADG Code recognises the GHS as an appropriate labelling system for inner packages of dangerous goods during transport. Labels prepared in accordance with this labelling code therefore comply with Australian inner package labelling transport requirements.

To meet both workplace and transport labelling requirements, additional health and safety information may be required on some transport containers. The additional information would generally relate to chronic health hazards, which are not regulated for transport purposes.

For outer packaging used within the workplace, workplace labelling requirements may be met by attaching to the container a supplementary panel or label that includes the additional information. The additional information should be clearly distinguishable from the information required to meet transport laws.

3.8 Consumer products

A hazardous chemical does not need to meet the labelling requirements under the [draft] WHS Regulations if the chemical is a consumer product with the original label on its container and if it is reasonably foreseeable that the hazardous chemical will be used in the workplace only:

- (i) in a quantity that is consistent with consumer household use, and
- (ii) in a way that is consistent with consumer household use, and
- (iii) in a way that is incidental to the nature of the work carried out by a worker using the chemical.

The following example shows how to distinguish between a consumer product and a workplace hazardous chemical:

- Toilet cleaner is sold in 750 mL bottles for domestic use and is sold in 20 L containers to commercial cleaning businesses. The 750 mL bottle is intended for domestic use and does not need to be labelled in accordance with the WHS Regulations.

However, it is reasonably foreseeable that, due to the package size of the 20 L product, it would be used in a workplace rather than in a domestic situation. Therefore, the 20 L product must be labelled according to workplace labelling requirements.

Consumer products which do not meet the definition of a workplace hazardous chemical and are covered by the SUSMP must comply with SUSMP labelling requirements.

3.9 Agricultural or veterinary chemical products

The [draft] WHS Regulations require that agricultural and veterinary chemicals must have a label that complies with the requirements of the Australian Pesticides and Veterinary Medicines Authority and includes the following:

- any hazard statement that is consistent with the correct classification of the chemical, and
- any precautionary statement that is consistent with the correct classification of the chemical.

Agricultural or veterinary chemical refers to any agricultural chemical product or veterinary chemical product as defined in the Commonwealth's *Agricultural and Veterinary Chemicals Code Act 1994*.

The Australian Pesticides and Veterinary Medicines Authority (APVMA) labelling codes for agricultural and veterinary chemical products are the *Ag Labelling Code* and the *Veterinary*

Labelling Code, respectively. You may omit the hazard pictogram and signal word provided that the label contains hazard statements and precautionary statements for all of the intrinsic hazards of the product.

3.10 C1 combustible liquids

The [draft] WHS Regulations provide that a C1 combustible liquid must be labelled in accordance with the GHS requirements for flammable liquids (category 4).

For any hazardous chemicals that satisfy the criteria for classification in the C1 combustible liquid hazard category, the hazard and precautionary statements that apply to GHS flammable liquid (category 4) must be used on the label. Refer to *Appendix C*.

3.11 Products containing nanomaterials

For engineered or manufactured nanomaterials, or chemicals containing engineered or manufactured nanomaterials, it is recommended that labels be prepared in accordance with this Code unless there is evidence that the nanomaterials are not hazardous.

The following label statements are recommended for products containing nanomaterials when the hazards are not fully characterised:

- Contains engineered/manufactured nanomaterials. Caution: Hazards unknown.
- Contains engineered/manufactured nanomaterials. Caution: Hazards not fully characterised.

These phrases are for the use on an interim basis, as the manufacturer/importer has a duty to correctly classify the chemical and include information on known hazards on the label in accordance with the WHS Regulations.

4. LABELLING DESIGN AND LAYOUT

The size of a label should be:

- a) large enough to contain all of the relevant hazard and other information in a size and style which is readily visible and easily legible in the workplace,
- b) appropriate to the size of the container, with larger labels present on larger containers.

The information on a label may be presented using one or more panels, or sections, dependent on the size and shape of the container. The label should be firmly secured to the outside of the container and should be visible in the normal storage position. The label should be sufficiently durable so as to remain legible and firmly attached to the container for the foreseeable lifetime of the product under normal storage and handling conditions.

The information and hazard pictograms on any label should be printed in a colour or colours that provide a distinct contrast to the background colour.

4.1 Grouping information

A label should group specific information together so that hazard or precautionary information can be easily located.

4.2 Orientation, size and colour of label elements

The text, hazard pictograms and other information on a label should be of a size and style that is easily legible and is appropriate to the size of the label and container. The following table specifies the minimum dimensions for hazard pictograms and sizes of text that are recommended for containers of various capacities:

Container capacity	Minimum hazard pictogram dimensions	Minimum text size
≤ 500 mL	15 x 15 mm	2.5 mm
> 500 mL and ≤ 5 L	20 x 20 mm	3 mm
> 5 L and ≤ 150 L	50 x 50 mm	5 mm
≥ 150 L	100 x 100 mm	7 mm

Examples of labels that have been produced in accordance with the labelling system described in this Code are provided in *Appendix H*.

5 OTHER DUTIES IN RELATION TO LABELLING

The [draft] WHS Regulations require that a person conducting a business or undertaking who manufactures hazardous chemicals at the workplace or decants or transfers a hazardous chemical from its original container, must ensure that the container is correctly labelled.

The person conducting a business or undertaking at the workplace must also ensure that a container labelled for a hazardous chemical is used only for the use, handling or storage of that hazardous chemical.

These requirements do not apply if the hazardous chemical is used immediately after it is put into the container and the container is thoroughly cleaned to the condition it would be in if it had never contained the material immediately after use.

5.1 Containers found without correct labelling

If you find that a container of a hazardous chemical is not correctly labelled in accordance with the WHS Regulations, you should attach the product identifier to the container. You should not use a hazardous chemical which is not correctly labelled. Store it in isolation until it is appropriately labelled.

If the product identifier of an unlabelled chemical is not known, this should be clearly marked on the container, for example by attaching a label to the container with the statement: **Caution - Do Not Use - Unknown Substance**.

You should take steps to either identify and correctly label the unknown chemical or dispose of the contents in accordance with relevant environmental regulations and, where necessary, in consultation with the relevant waste management authority.

5.2 REVIEWING AND UPDATING INFORMATION ON LABELS

From time to time, the hazard classification of a hazardous chemical may change, for example where new information becomes available. Where the hazard classification of a hazardous chemical changes, the label should be reviewed and, if necessary, revised to reflect any required changes.

Importers, manufacturers and suppliers should review any new or significant information in relation to any hazardous chemicals they import, manufacture or supply. A review of the literature and other relevant sources of information should be undertaken on a regular basis.

It is good practice to review the label information of a hazardous chemical at the same time as the Safety Data Sheet (SDS) is updated. SDSs are updated:

- a) when any new information about the hazardous chemical is known or received to ensure the SDS contains correct, current information; and
- b) at least once every 5 years.

If you have duty to label a workplace hazardous chemical, then you must ensure that the label contains correct information at the time it is affixed to the container of the hazardous chemical.

APPENDIX A – Definitions and abbreviations

ADG Code means the *Australian Code for the Transport of Dangerous Goods by Road and Rail*, 7th edition, approved by the Australian Transport Council as in force from time to time.

Note The ADG code is accessible at www.ntc.gov.au.

Article means a manufactured item, other than a fluid or particle, that:

(a) is formed into a particular shape or design during manufacture; and

(b) has hazard properties and a function that are wholly or partly dependent on the shape or design.

CAS Name is the chemical name recommended by the Chemical Abstracts Service, Columbus, Ohio, USA.

Chemical identity means a name, in accordance with the nomenclature systems of the International Union of Pure and Applied Chemistry or the Chemical Abstracts Service, or a technical name, that gives a chemical a unique identity.

Class, of dangerous goods, means a number in a class of dangerous goods are assigned in the ADG Code.

Class label means a pictogram described in the ADG Code for a class, or division of a class, of dangerous goods.

Combustible liquid means a liquid, other than a flammable liquid, that has a flash point, and a fire point less than its boiling point.

Combustible substance means a substance that is combustible and includes dust, fibres, fumes, mists or vapours produced by the substance.

Consumer product means a thing that:

(a) is packed or repacked primarily for use by a household consumer or for use in an office; and

(b) if the thing is packed or repacked primarily for use by a household consumer—is packed in the way and quantity in which it is intended to be used by a household consumer; and

(c) if the thing is packed or repacked primarily for use in an office—is packed in the way and quantity in which it is intended to be used for office work.

Division, of dangerous goods, means a number, in a class of dangerous goods, to which the dangerous goods are assigned in the ADG Code.

Explosives Code means the *Australian Code for the Transport of Explosives by Road and Rail* endorsed by the Workplace Relations Ministers' Council as amended from time to time.

Exposure standard means an exposure standard published by Safe Work Australia in the *Atmospheric Contaminant Workplace Exposure Standards*.

Note The Atmospheric Contaminant Workplace Exposure Standards will replace the Adopted National Exposure Standards for Atmospheric Contaminants in the Occupational Environment [NOSHC:1003(1995)].

Generic name means a name applied to a group of chemicals having a similar structure and properties.

Genuine research means systematic investigative or experimental activities that are carried out for either acquiring new knowledge (whether or not the knowledge will have a specific practical application) or creating new or improved materials, products, devices, processes or services.

GHS means the Globally Harmonised System of Classification and Labelling of Chemicals published by the United Nations.

Hazard means a situation or thing that has the potential to harm people, property or the environment.

Hazard category means a division of criteria within a hazard class in the GHS.

Hazard class means the nature of a physical, health or environmental hazard and includes a class of dangerous goods

Hazard pictogram means a graphical composition, including a symbol plus other graphical elements, that is assigned in the GHS to a hazard class or hazard category.

Hazard statement means a statement assigned to a hazard class or hazard category describing the nature of the hazards of a hazardous chemical including, if appropriate, the degree of hazard.

Import means to bring into the jurisdiction from outside Australia.

Ingredient means any component of a mixture.

In transit—a thing is *in transit* if the thing:

- (a) is supplied to, or stored at, a workplace in containers that are not opened at the workplace; and
- (b) is not used at the workplace; and
- (c) is kept at the workplace for not more than 5 consecutive days.

ISO name is a chemical name approved by the International Organisation for Standardisation.

IUPAC name is the chemical name recommended by the International Union of Pure and Applied Chemistry.

Label means written, printed or graphical information elements concerning a hazardous chemical that is affixed to, printed on, or attached to the container of a hazardous chemical.

Laboratory means a building or room equipped for analysis, genuine research or practical teaching, and which is not used for production purposes.

Manufacture includes the activities of packing, repacking, formulating, blending, mixing, making, remaking and synthesising.

Mixture means a combination of, or a solution composed of, two or more substances that do not react with each other.

Precautionary Statement means a phrase prescribed by the GHS that describes recommended measures to be taken to prevent or minimise the adverse effects of exposure to a hazardous chemical or the improper handling of a hazardous chemical.

Product identifier means the name or number used to identify a product on a label or in a Safety Data Sheet (SDS).

Proper Shipping Name means a proper shipping name under the ADG Code.

Research chemical means a substance or mixture that is manufactured in a laboratory for genuine research and is not for use or supply for a purpose other than analysis or genuine research.

Safety data sheet (SDS) means a document that describes the identity, properties (that is to say chemical and physical properties and health hazard information), uses, precautions for use and

safe handling procedures of a hazardous chemical.

Signal word means the word **danger** or **warning** used on a label to indicate to a label reader the relative severity level of a hazard, and to alert the reader to a potential hazard, under the GHS.

Substance means a chemical element or compound in its natural state or obtained or generated by a process:

- (a) including any additive necessary to preserve the stability of the element or compound and any impurities deriving from the process; but
- (b) excluding any solvent that may be separated without affecting the stability of the element or compound, or changing its composition.

SUSMP means the Standard for the Uniform Scheduling of Medicines and Poisons, published by the National Drugs and Poisons Schedule Committee as amended from time to time.

Technical name means a name that is:

- (a) ordinarily used in commerce, regulations and codes to identify a substance or mixture, other than an International Union of Pure and Applied Chemistry or Chemical Abstracts Service name; and
- (b) recognised by the scientific community.

Transfer includes the pumping, dispensing, or decanting from one container into another or from one place to another.

UN Number means the number assigned to dangerous goods by the United Nations Subcommittee of Experts on the Transport of Dangerous Goods. UN Numbers are published in the UN Recommendations on the Transport of Dangerous Goods – Model Regulation, and in the ADG Code.

APPENDIX B – GUIDE FOR SELECTING GENERIC NAMES

This guide describes a procedure for naming hazardous chemicals and the division of substances into families.

The families are defined in the following manner:

- a) inorganic or organic substances whose properties are identified by having a common chemical element as their chief characteristic. The family name is derived from the name of the chemical element. These families are identified as in subsection A1.2 below by the atomic number of the chemical element (001 to 103); and
- b) organic substances whose properties are identified by having a common functional group as their chief characteristic.
 - (i) the family name is derived from the functional group name, and
 - (ii) these families are identified by the number convention found in subsection A1.2 (601 to 650).
- c) Sub-families bringing together substances with a common specific character have been added in certain cases.

A1.1 Establishing the Generic Name

General Principles

In selecting a generic name, the following approach is adopted:

- a) Identify the functional groups and chemical elements present in the molecule; and
- b) Determine the most important functional groups and chemical elements, which contribute to its properties.

The identified functional groups and elements taken into account are the names of the families and sub-families. These names are set out in subsection 3 in the form of a (non-restrictive) list.

Practical application

After having conducted a search to see if the substance belongs to one or more families or sub-families on the list, the generic name can be established in the following way:

- a) If the name of a family or sub-family is sufficient to characterise the chemical elements or important functional groups, this name will be chosen as the generic name.

Examples:

Name	Family	Generic Name
	Sub-family	
1,4-dihydroxybenzene	604: Phenols and derivatives	Phenol derivative
Butanols	603: Alcohols and derivatives Aliphatic alcohols	Aliphatic alcohol
2-isopropoxyethanol	603: Alcohols and derivatives Glycoethers	Glycoether
Methacrylate	607: Organic acids and derivatives Acrylates	acrylate

- b) If the name of a family or sub-family is not sufficient to characterise the chemical elements of important functional groups, the generic name should be a combination of the corresponding different family or sub-family names.

Examples:

Name	Family Sub-family	Generic Name
Lead hexafluorosilicate	009: Fluorine compounds Inorganic fluorides 082: Lead compounds Lead compounds	Inorganic lead fluoride
Chlorobenzene	602: Halogenated hydrocarbons Halogenated aromatic compounds 017: Chlorine compounds	Chlorinated aromatic compounds
2,3,6-trichlorophenylacetic acid	607: organic acids Halogenated aromatic acids 017: chlorine compounds	Chlorinated aromatic acid
1-chloro-1-nitropropane	610: chloronitrated derivatives 601: hydrocarbons Aliphatic hydrocarbons	Chloronitrated aliphatic hydrocarbon
Tetrapropyl dithiopyrophosphate	015: phosphorus compounds Phosphoric esters 016: sulphur compounds	Thiophosphoric ester

- c) In the case of certain elements, notably metals, the name of the family or sub-family may be indicated by the words 'organic' or 'inorganic'.

Examples:

Name	Family Sub-family	Generic Name
Dimercury dichloride	080: mercury compounds	Inorganic mercury compound
Barium acetate	056: barium compounds	organic
Ethyl nitrite	007: nitrogen compounds Nitrites	Organic nitrite
Sodium hydrosulphite	016: sulphur compounds	Inorganic sulphur compound

A1.2 Division of substances into families and sub-families

Family No	Families Sub-families
001	Hydrogen compounds Hydrides
003	Lithium compounds
004	Beryllium compounds
005	Boron compounds Boranes Borates
006	Carbon compounds Carbamates Inorganic carbon compounds Salts of hydrogen cyanide Urea and derivatives

Family No	Families Sub-families
007	Nitrogen compounds Quaternary ammonium compounds Acid nitrogen compounds Nitrates Nitrites
008	Oxygen compounds
009	Fluorine compounds Inorganic fluorides
011	Sodium compounds
012	Magnesium compounds Organometallic magnesium derivatives
013	Aluminium compounds Organometallic aluminium derivatives
014	Silicon compounds Silicones Silicates
015	Phosphorus compounds Acid phosphorus compounds Phosphonium compounds Phosphoric esters Phosphates Phosphites Phosphoramides and derivatives
016	Sulphur compounds Acid sulphur compounds Mercaptans Sulphates Sulphites
017	Chlorine compounds Chlorates Perchlorates
018	Argon compounds
019	Potassium compounds
020	Calcium compounds
021	Scandium compounds
022	Titanium compounds
023	Vanadium compounds
024	Chromium compounds Chromium VI compounds
025	Manganese compounds
026	Iron compounds
027	Cobalt compounds
028	Nickel compounds
029	Copper compounds
030	Zinc compounds Organometallic zinc derivatives
031	Gallium compounds
032	Germanium compounds
033	Arsenic compounds

Family No	Families Sub-families
034	Selenium compounds
035	Bromine compounds
036	Krypton compounds
037	Rubidium compounds
038	Strontium compounds
039	Yttrium compounds
040	Zirconium compounds
041	Niobium compounds
042	Molybdenum compounds
043	Technetium compounds
044	Ruthenium compounds
045	Rhodium compounds
046	Palladium compounds
047	Silver compounds
048	Cadmium compounds
049	Indium compounds
050	Tin compounds Organometallic tin derivatives
051	Antimony compounds
052	Tellurium compounds
053	Iodine compounds
054	Xenon compounds
055	Caesium compounds
056	Barium compounds
057	Lanthanum
058	Cerium compounds
059	Praseodymium compounds
060	Neodymium compounds
061	Promethium compounds
062	Samarium compounds
063	Europium compounds
064	Gadolinium compounds
065	Terbium compounds
066	Dysprosium compounds
067	Holmium compounds
068	Erbium compounds
069	Thulium compounds
070	Ytterbium compounds
071	Lutetium compounds
072	Hafnium compounds
073	Tantalum compounds
074	Tungsten compounds
075	Rhenium compounds
076	Osmium compounds
077	Iridium compounds
078	Platinum compounds
079	Gold compounds

Family No	Families Sub-families
080	Mercury compounds Organometallic mercury derivatives
081	Thallium compounds
082	Lead compounds Organometallic lead derivatives
083	Bismuth compounds
084	Polonium compounds
085	Astate compounds
086	Radon compounds
087	Francium compounds
088	Radium compounds
089	Actinium compounds
090	Thorium compounds
091	Protactinium compounds
092	Uranium compounds
093	Neptunium compounds
094	Plutonium compounds
095	Americium compounds
096	Curium compounds
097	Berkelium compounds
098	Californium compounds
099	Einsteinium compounds
100	Fermium compounds
101	Mendelevium compounds
102	Nobelium compounds
103	Lawrencium compounds
601	Hydrocarbons Aliphatic hydrocarbons Aromatic hydrocarbons Alicyclic hydrocarbons Polycyclic aromatic hydrocarbons (PAH)
602	Halogenated hydrocarbons* Halogenated aliphatic hydrocarbons* Halogenated aromatic hydrocarbons* Halogenated alicyclic hydrocarbons* * Specify according to family corresponding to halogen.
603	Alcohols and derivates Aliphatic alcohols Aromatic alcohols Alicyclic alcohols Alcanolamines Epoxy derivatives Ethers Glycoethers Glycols and polyols
604	Phenols and derivatives Halogenated phenol derivatives* * Specify according to the family corresponding to halogen.

Family No	Families Sub-families
605	Aldehydes and derivatives Aliphatic aldehydes Aromatic aldehydes Alicyclic aldehydes Aliphatic acetals Aromatic acetals Alicyclic acetals
606	Ketones and derivatives Aliphatic Ketones Aromatic Ketones* Alicyclic Ketones * Quinones included
607	Organic acids and derivatives Aliphatic acids Halogenated aliphatic acids* Aromatic acids Halogenated aromatic acids* Alicyclic acids Halogenated alicyclic acids* Aliphatic acid anhydrides Halogenated aliphatic acid anhydrides* Aromatic acid anhydrides Halogenated aromatic acid anhydrides* Alicyclic acid anhydrides Halogenated alicyclic acid anhydrides* Salts of aliphatic acid Salts of halogenated aliphatic acid* Salts of aromatic acid Salts of halogenated aromatic acid* Salts of alicyclic acid Salts of halogenated alicyclic acid* Esters of aliphatic acid Esters of halogenated alicyclic acid* Esters of aromatic acid Esters of halogenated aromatic acid* Esters of alicyclic acid Esters of halogenated alicyclic acid* Esters of glycol ether Acrylates Methacrylates Lactones Acyl halogenides * Specify according to the family corresponding to halogen.
608	Nitriles and derivatives
609	Nitrated derivatives
610	Chloronitrated derivatives
611	Azoxy and azoic derivatives

Family No	Families Sub-families
612	Aminated derivatives Aliphatic amines and derivatives Alicyclic amines and derivatives Aromatic amines and derivatives Aniline and derivatives Benzidine and derivatives
613	Heterocyclic basis and derivatives Benzimidazole and derivatives Imidazol and derivatives Pyrethrinoids Quinoline and derivatives Triazine and derivatives Triazole and derivatives
614	Glucosides and alkaloids Alkaloid and derivatives Glucosids and derivatives
615	Cyantes and isocyanates Cyanates Isocyanates
616	Amides and derivatives Acetamide and derivatives Anilides
617	Organic Peroxides
650	Various substances Do not use this family. Instead, use the families or sub-families mentioned above.

APPENDIX C – APPLICATION OF LABEL ELEMENTS

This appendix is intended to provide guidance for the application of an appropriate signal word, and appropriate hazard pictograms, hazard statements, and precautionary statements. The tables at the end of this appendix specify the signal word, hazard pictograms, hazard statements and precautionary statements that apply to each hazard class and category.

Structure of Hazard Statement Text

All of the hazard statement text that appears in bold should appear on the label, except as otherwise specified.

All of the information that appears in italics should appear as part of the hazard statement, where applicable.

The hazard statement codes shown in the tables are intended to be used for reference purposes only. They are not part of the hazard statement text and should not be used on a label.

Structure of Precautionary Statement Text

There are five types of precautionary statements: **general**, **prevention**, **response** (in case of accidental spillage or exposure, emergency response and first aid), **storage** and **disposal**.

All of the precautionary statement text that appears in bold should appear on the label, except as otherwise specified.

To provide flexibility in the application of precautionary phrases, a combination of statements may be used to save label space and improve the readability of phrases. Combination of phrases can also be useful for different types of hazard where the precautionary behaviour is similar.

When a forward-slash or diagonal mark [/] appears in a precautionary statement text, it indicates that a choice has to be made between the phrases they separate

When three full stops [...] appear in a precautionary statement text, it indicates that all applicable conditions are not listed.

When text in the precautionary statement text appears in italics, this indicates that specific conditions apply to the use or allocation of the precautionary statement. This may relate to conditions attaching to either the general use of a precautionary statement or its use for a particular hazard class and/or hazard category. The text in italics is not intended to be present on a label.

The precautionary statements included in the following matrices cover general emergency response and first-aid information. For some specific chemicals, supplementary first aid, treatment measures or specific antidotes or cleansing materials may be required. Poisons Centres and/or medical practitioners or specialist advice should be sought in such situations and included on labels where appropriate

The precautionary statement codes that are used in the tables are intended to be used for reference purposes only. They are not part of the precautionary statement text and should not be used on a label.

Precautionary Statement Formed from a Combination of Phrases

'Keep away from heat, sparks and open flame and store in a cool well ventilated place'.

Precautionary Statement that Contains a Forward-Slash [/]

The precautionary statement:

P280 **'Wear protective gloves/protective clothing/eye protection/face protection'**, could read:

'Wear eye protection', where the hazard classification does not warrant the additional personal protective equipment.

Precautionary Statement that Contains Three Full Stops [...]

For the precautionary statement:

P241 **'Use explosion-proof electrical/ventilating/lighting/.../equipment'**, the use of '...' indicates that other equipment may need to be specified.

Precautionary Statement that Contains Text in Italics

The precautionary statement:

P241 **'Use explosion-proof electrical/ventilating/lighting/.../ equipment'**, only applies for flammable solids *'if dust clouds can occur'*.

General Precautionary Statements

General precautionary statements are not aligned with any particular hazard category, and according to the GHS principles, these statements are required for consumer products only. Manufacturers of hazardous chemicals may choose to include these on workplace labels, particularly where it is foreseeable that the chemical may be used in a non-workplace situation.

General Precautionary Statements

P101 If medical advice is needed, have product container or label at hand
P102 Keep out of reach of children
P103 Read label before use

Allocation of label elements

The matrices below provide the following information for each hazard class and hazard category of the GHS:

- a) hazard category; and
- b) the assigned symbol; and
- c) the assigned signal word; and
- d) the assigned hazard statement and code; and
- e) the assigned precautionary statements, by precautionary statement type, and code.

 Division 1.6 *No signal word* H206 *No hazard statement*

Precautionary statements			
Prevention	Response	Storage	Disposal
<i>No precautionary statements</i>	<i>No precautionary statements</i>	<i>No precautionary statements</i>	<i>No precautionary statements</i>

*Note: Symbol for Explosive Division 1.6 is the symbol used for the transport of dangerous goods

FLAMMABLE GASES

Hazard category **Signal word** **Hazard statement**
 1 **Danger** H220 **Extremely flammable gas**

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or competent authority to specify applicable ignition source(s).	P377 Leaking gas fire: Do not extinguish, unless leak can be stopped safely. P381 Eliminate all ignition sources if safe to do so.	P403 Store in well-ventilated place.	

*This symbol is according to the ADG Code for the transport of dangerous goods

FLAMMABLE AEROSOLS

Symbol
Flame

Hazard category	Signal word	Hazard statement
1	Danger	H222 Extremely flammable aerosol
2	Warning	H223 Flammable aerosol

Precautionary statements

Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition sources(s). P211 Do not spray on an open flame or other ignition source. P251 Pressurized container: Do not pierce or burn, even after use.		P410 + P412 Protect from sunlight. Do not expose to temperatures exceeding 50°C/122°F.	

OXIDISING GASES

Symbol
Flame over circle

Hazard category	Signal word	Hazard statement
1	Danger	H270 May cause or intensify fire; oxidiser

Precautionary statements

Prevention	Response	Storage	Disposal
P220 Keep/Store away from clothing/.../combustible materials. ...Manufacturer/supplier or the competent authority to specify other incompatible materials. P244 Keep reduction valves free from grease and oil.	P370 + P376 In case of fire: Stop leak if safe to do so.	P403 Store in well-ventilated place.	

GASES UNDER PRESSURE

Symbol Gas cylinder

Hazard category	Signal word	Hazard statement
Compressed gas	Warning	H280 Contains gas under pressure; may explode if heated
Liquefied gas	Warning	H280 Contains gas under pressure; may explode if heated
Dissolved gas	Warning	H280 Contains gas under pressure; may explode if heated

Precautionary statements			
Prevention	Response	Storage	Disposal
		P410 + P403 Protect from sunlight. Store in a well-ventilated place.	

GASES UNDER PRESSURE

Symbol Gas cylinder

Hazard category	Signal word	Hazard statement
Refrigerated liquefied gas	Warning	H281 Contains refrigerated gas; may cause cryogenic burns or injury

Precautionary statements			
Prevention	Response	Storage	Disposal
P282 Wear cold insulating gloves/face shield/eye protection.	P336 Thaw frosted parts with lukewarm water. Do not rub affected area. P315 Get immediate medical advice/attention	P403 Store in well-ventilated place.	

FLAMMABLE LIQUIDS

Symbol
Flame

Hazard category	Signal word	Hazard statement
1	Danger	H224 Extremely flammable liquid and vapour
2	Danger	H225 Highly flammable liquid and vapour
3	Warning	H226 Flammable liquid and vapour

Precautionary statements			
Prevention	Response	Storage	Disposal
<p>P210 Keep away from heat/sparks/open flames/hot surfaces. Manufacturer/supplier or the competent authority to specify applicable ignition source(s).</p> <p>P233 Keep container tightly closed.</p> <p>P240 Ground/Bond container and receiving equipment - <i>if electrostatically sensitive material is for reloading.</i> - <i>if product is volatile so as to generate hazardous atmosphere.</i></p> <p>P241 Use explosion-proof electrical/ventilating/lighting/.../equipment. ... Manufacturer/supplier or competent authority to specify other equipment.</p> <p>P242 Use only non-sparking tools.</p> <p>P243 Take precautionary measures against static discharge.</p> <p>P280 Wear protective gloves/eye protection/face protection Manufacturer/supplier or competent authority to specify type of equipment.</p>	<p>P303 + P361 + P353 IF ON SKIN (or hair): Remove/Take off immediately all contaminated clothing. Rinse skin with water/shower.</p> <p>P370 + P378 In case of fire: Use ... for extinction. ...Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i></p>	<p>P403 + P235 Store in a well-ventilated place. Keep cool.</p>	<p>P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).</p>

NON-GHS HAZARD CATEGORY - C1-COMBUSTIBLE LIQUID

			Symbol <i>No symbol</i>
Hazard category Class C1 combustible liquid	Signal word Warning	Hazard statement H227 Combustible liquid	
Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from flames and hot surfaces. – No smoking. P280 Wear protective gloves/eye protection/face protection Manufacturer/supplier or the competent authority to specify type of equipment.	P370 + P378 In case of fire: Use ... for extinction. ... Manufacturer/supplier or the competent authority to specify appropriate media. <i>if water increases risk.</i>	P403 + P235 Store in a well-ventilated place. Keep cool.	P501 Dispose of contents/container to... in accordance with local/regional/national/international Regulations (to be specified).

*Note: label elements for C1 combustible liquids are identical to those of GHS Flammable liquid category 4

FLAMMABLE SOLIDS

Symbol Flame

Hazard category	Signal word	Hazard statement
1	Danger	H228 Flammable solid
2	Warning	H228 Flammable solid

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s). P240 Ground/Bond container and receiving equipment. - <i>if electrostatically sensitive material is for reloading.</i> P241 Use explosion-proof electrical/ventilating/lighting/... /equipment. ... Manufacturer/supplier or the competent authority to specify other equipment. - <i>if dust clouds can occur.</i> P280 Wear protective gloves/eye protection/face protection Manufacturer/supplier or the competent authority to specify type of equipment.	P370 + P378 In case of fire: Use ... for extinction ...Manufacturer/supplier or the competent authority to specify appropriate media. <i>if water increases risk.</i>		

SELF-REACTIVE SUBSTANCES AND MIXTURES

Symbol Exploding bomb

Hazard category	Signal word	Hazard statement
Type A	Danger	H240 Heating may cause an explosion

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s). P220 Keep/Store away from clothing/.../combustible materials. ... Manufacturer/supplier or the competent authority to specify other incompatible materials. P234 Keep only in original container. P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.	P370 + P378 In case of fire: Use ... for extinction ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i> P370 + P380 + P375 In case of fire: Evacuate area. Fight fire remotely due to the risk of explosion.	P403 + P235 Store in a well-ventilated place. Keep cool. P411 Store at temperatures not exceeding ...°C/...°F. ... Manufacturer/supplier or the competent authority to specify temperature. P420 Store away from other materials.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

SELF-REACTIVE SUBSTANCES AND MIXTURES

Symbol Exploding bomb and flame
--

Hazard category	Signal word	Hazard statement
Type B	Danger	H241 Heating may cause a fire or explosion

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s). P220 Keep/Store away from clothing/.../combustible materials. ... Manufacturer/supplier or the competent authority to specify other incompatible materials. P234 Keep only in original container. P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.	P370 + P378 In case of fire: Use ... for extinction. ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk</i> P370 + P380 + P375 In case of fire: Evacuate area. Fight fire remotely due to the risk of explosion.	P403 + P235 Store in a well-ventilated place. Keep cool. P411 Store at temperatures not exceeding ...°C/...°F. ... Manufacturer/supplier or the competent authority to specify temperature. P420 Store away from other materials.	P501 Dispose of contents/container to... ...in accordance with local/regional/national/international Regulations (to be specified).

SELF-REACTIVE SUBSTANCES AND MIXTURES

Symbol
Flame

Hazard category	Signal word	Hazard statement
Type C	Danger	H242 Heating may cause a fire
Type D	Danger	H242 Heating may cause a fire
Type E	Warning	H242 Heating may cause a fire
Type F	Warning	H242 Heating may cause a fire

Precautionary statements			
Prevention	Response	Storage	Disposal
<p>P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s).</p> <p>P220 Keep/Store away from clothing/.../combustible materials. ...Manufacturer/supplier or the competent authority to specify other incompatible materials.</p> <p>P234 Keep only in original container.</p> <p>P280 Wear protective gloves/eye protection/face protection. Note: Hazard category Type G: There are no label elements allocated to this hazard category

PYROPHORIC LIQUIDS

Symbol Flame

Hazard category	Signal word	Hazard statement
1	Danger	H250 Catches fire spontaneously if exposed to air

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition sources(s). P222 Do not allow contact with air. P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.	P302 + P334 IF ON SKIN: Immerse in cool water/wrap with wet bandages P370 + P378 In case of fire: Use ... for extinction ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i>	P422 Store contents under Manufacturer/supplier or the competent authority to specify appropriate liquid or inert gas.	

PYROPHORIC SOLIDS

Symbol Flame

Hazard category	Signal word	Hazard statement
1	Danger	H250 Catches fire spontaneously if exposed to air

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s). P222 Do not allow contact with air. P280 Wear protective gloves/eye protection/face protection Manufacturer/supplier or the competent authority to specify type of equipment.	P335 + P334 Brush off loose particles from skin. Immerse in cool water/wrap in wet bandages. P370 + P378 In case of fire: Use ... for extinction ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i>	P422 Store contents underManufacturer/supplier or the competent authority to specify appropriate liquid or inert gas.	

SELF-HEATING SUBSTANCES AND MIXTURES

Symbol Flame

Hazard category	Signal word	Hazard statement
1	Danger	H251 Self-heating; may catch fire
2	Warning	H252 Self-heating in large quantities; may catch fire

Precautionary statements			
Prevention	Response	Storage	Disposal
P235 + P410 Keep cool. Protect from sunlight. P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.		P407 Maintain air gap between stacks/pallets. P413 Store bulk masses greater than ... kg/...lbs at temperatures not exceeding ...°C/...°F. ... Manufacturer/supplier or the competent authority to specify mass and temperature. P420 Store away from other materials.	

SUBSTANCES AND MIXTURES WHICH, IN CONTACT WITH WATER, EMIT FLAMMABLE GASES

Symbol
Flame

Hazard category	Signal word	Hazard statement
1	Danger	H260 In contact with water releases flammable gases, which may ignite spontaneously
2	Danger	H261 In contact with water releases flammable gases

Precautionary statements			
Prevention	Response	Storage	Disposal
<p>P223 Keep away from any possible contact with water, because of violent reaction and possible flash fire.</p> <p>P231 + P232 Handle under inert gas. Protect from moisture.</p> <p>P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.</p>	<p>P335 + P334 Brush off loose particles from skin and immerse in cool water/wrap in wet bandages.</p> <p>P370 + P378 In case of fire: Use ... for extinction ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i></p>	<p>P402 + P404 Store in a dry place. Store in a closed container.</p>	<p>P501 Dispose of contents/container to... ...in accordance with local/regional/national/international Regulations (to be specified).</p>

SUBSTANCES AND MIXTURES WHICH, IN CONTACT WITH WATER, EMIT FLAMMABLE GASES

Hazard category 3
Signal word Warning
Hazard statement H261 **In contact with water releases flammable gases**

Symbol Flame

Precautionary statements			
Prevention	Response	Storage	Disposal
P231 + P232 Handle under inert gas. Protect from moisture. P280 Wear protective gloves/eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment.	P370 + P378 In case of fire: Use ... for extinction. ...Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i>	P402 + P404 Store in a dry place. Store in a closed container.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

OXIDISING LIQUIDS

Hazard category 1 **Signal word** Danger **Hazard statement** H271 **May cause fire or explosion; strong oxidiser**

Symbol
 Flame over circle

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat. P220 Keep/Store away from clothing and other combustible materials. P221 Take any precaution to avoid mixing with combustibles/... ... Manufacturer/supplier or the competent authority to specify other incompatible materials. P280 Wear protective gloves /eye protection/face protection. Manufacturer/supplier or the competent authority to specify type of equipment. P283 Wear fire/flame resistant/retardant clothing.	P306 + P360 IF ON CLOTHING: Rinse immediately contaminated clothing and skin with plenty of water before removing clothes. P371 + P380 + P375 In case of major fire and large quantities: Evacuate area. Fight fire remotely due to the risk of explosion. P370 + P378 In case of fire: Use ... for extinction. ... Manufacturer/supplier or the competent authority to specify appropriate media. - <i>if water increases risk.</i>		P501 Dispose of contents/container to... ...in accordance with local/regional/national/international Regulations (to be specified).

OXIDISING LIQUIDS

Symbol Flame over circle

Hazard category	Signal word	Hazard statement
2	Danger	H272 May intensify fire; oxidiser
3	Warning	H272 May intensify fire; oxidiser

Precautionary statements

Prevention	Response	Storage	Disposal
<p>P210 Keep away from heat.</p> <p>P220 Keep/Store away from clothing/.../combustible materials. ...Manufacturer/supplier or the competent authority to specify other incompatible materials.</p> <p>P221 Take any precaution to avoid mixing with combustibles/... ... Manufacturer/supplier or the competent authority to specify other incompatible materials.</p> <p>P280 Wear protective gloves/eye protection/face protection. Note: Hazard category Type G: There are no label elements allocated to this hazard category

CORROSIVE TO METALS

Symbol Corrosion

Hazard category	Signal word	Hazard statement
1	Warning	H290 May be corrosive to metals

Precautionary statements			
Prevention	Response	Storage	Disposal
P234 Keep only in original container.	P390 Absorb spillage to prevent material damage.	P406 Store in corrosive resistant/... container with a resistant inner liner. ... Manufacturer/supplier or the competent authority to specify other compatible materials.	

ACUTE TOXICITY - ORAL

Symbol Skull and crossbones

Hazard category	Signal word	Hazard statement
1	Danger	H300 Fatal if swallowed
2	Danger	H300 Fatal if swallowed

Precautionary statements			
Prevention	Response	Storage	Disposal
P264 Wash ...thoroughly after handling. ... Manufacturer/supplier or the competent authority to specify parts of the body to be washed after handling. P270 Do not eat, drink or smoke when using this product.	P301 + P310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P321 Specific treatment (see ... on this label) ... Reference to supplemental first aid instruction. - <i>if immediate administration of antidote is required.</i> P330 Rinse mouth.	P405 Store locked up.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY – ORAL

Hazard category 3 **Signal word** Danger **Hazard statement** H301 Toxic if swallowed

Symbol
Skull and crossbones

Precautionary statements			
Prevention	Response	Storage	Disposal
P264 Wash ... thoroughly after handling. ... Manufacturer/supplier or the competent authority to specify parts of the body to be washed after handling. P270 Do not eat, drink or smoke when using this product.	P301 + P310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P321 Specific treatment (see ... on this label) ... Reference to supplemental first aid instruction. - <i>if immediate administration of antidote is required.</i> P330 Rinse mouth.	P405 Store locked up.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY – ORAL

Hazard category 4 **Signal word** Warning **Hazard statement** H302 Harmful if swallowed

Symbol
Exclamation mark

Precautionary statements			
Prevention	Response	Storage	Disposal
P264 Wash ... thoroughly after handling. ...Manufacturer/supplier or the competent authority to specify parts of the body to be washed after handling. P270 Do not eat, drink or smoke when using this product.	P301 + P312 IF SWALLOWED: Call a POISON CENTER or doctor/physician if you feel unwell. P330 Rinse mouth.		P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY - DERMAL

Symbol Skull and crossbones

Hazard category	Signal word	Hazard statement
1	Danger	H310 Fatal in contact with skin
2	Danger	H310 Fatal in contact with skin

Precautionary statements			
Prevention	Response	Storage	Disposal
<p>P262 Do not get in eyes, on skin, or on clothing.</p> <p>P264 Wash ... thoroughly after handling. ... Manufacturer/supplier or the competent authority to specify parts of the body to be washed after handling.</p> <p>P270 Do not eat, drink or smoke when using this product.</p> <p>P280 Wear protective gloves/protective clothing. Manufacturer/supplier or the competent authority to specify type of equipment.</p>	<p>P302 + P350 IF ON SKIN: Gently wash with plenty of soap and water.</p> <p>P310 Immediately call a POISON CENTRE or doctor/physician.</p> <p>P322 Specific measures (see ... on this label) ... Reference to supplemental first aid instruction. <i>- if immediate measures such as specific cleansing agent is advised.</i></p> <p>P361 Remove/Take off immediately all contaminated clothing.</p> <p>P363 Wash contaminated clothing before reuse.</p>	<p>P405 Store locked up.</p>	<p>P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).</p>

ACUTE TOXICITY - DERMAL

Symbol Skull and crossbones

Hazard category **Signal word** **Hazard statement**

3 Danger H311 **Toxic in contact with skin**

Precautionary statements			
Prevention	Response	Storage	Disposal
P280 Wear protective gloves/protective clothing. Manufacturer/supplier or the competent authority to specify type of equipment.	P302 + P352 IF ON SKIN: Wash with plenty of soap and water. P312 Call a POISON CENTRE or doctor/physician if you feel unwell. P322 Specific measures (see ... on this label) ... Reference to supplemental first aid instruction. <i>- if measures such as specific cleansing agent is advised.</i> P361 Remove/Take off immediately all contaminated clothing. P363 Wash contaminated clothing before reuse.	P405 Store locked up.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY – DERMAL

Hazard category	Signal word	Hazard statement
4	Warning	H312 Harmful in contact with skin

Symbol Exclamation mark

Precautionary statements			
Prevention	Response	Storage	Disposal
P280 Wear protective gloves/protective clothing Manufacturer/supplier or the competent authority to specify type of equipment.	P302 + P352 IF ON SKIN: Wash with plenty of soap and water. P312 Call a POISON CENTER or doctor/physician if you feel unwell. P322 Specific measures (see ... on this label) ... Reference to supplemental first aid instruction. - <i>if measures such as specific cleansing agent is advised.</i> P363 Wash contaminated clothing before reuse.		P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY - INHALATION

Symbol Skull and crossbones

Hazard category	Signal word	Hazard statement
1	Danger	H330 Fatal if inhaled
2	Danger	H330 Fatal if inhaled

Precautionary statements			
Prevention	Response	Storage	Disposal
P260 Do not breathe dust/fume/gas/mist/vapours/spray. Manufacturer/supplier or the competent authority to specify applicable conditions. P271 Use only outdoors or in a well-ventilated area. P284 Wear respiratory protection. Manufacturer/supplier or the competent authority to specify equipment.	P304 + P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. P310 Immediately call a POISON CENTER or doctor/physician. P320 Specific treatment is urgent (see ... on this label) ... Reference to supplemental first aid instruction. - <i>if immediate administration of antidote is required.</i>	P403 + P233 Store in a well-ventilated place. Keep container tightly closed. - <i>if product is volatile as to generate hazardous atmosphere.</i> P405 Store locked up.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

ACUTE TOXICITY - INHALATION

Hazard category 3 **Signal word** Danger **Hazard statement** H331 Toxic if inhaled

Symbol
Skull and crossbones

Precautionary statements			
Prevention	Response	Storage	Disposal

ADDITIONAL NON-GHS HAZARD STATEMENTS⁴

There are twelve additional non-GHS hazard statements that should be used on labels where applicable.

Physical hazard statements

AUH001: Explosive when dry

For explosive substances and mixtures placed on the market wetted with water or alcohols or diluted with other chemicals to suppress their explosives properties.

AUH006: Explosive with or without contact with air

For substances and mixtures which are unstable at ambient temperatures, such as acetylene.

AUH014: Reacts violently with water

For substances and mixtures which react violently with water, such as acetyl chloride, alkali metals, titanium tetrachloride.

AUH018: In use, may form flammable/explosive vapour-air mixture

For substances and mixtures not classified as flammable themselves, which may form flammable/explosive vapour-air mixtures. For substances this might be the case for halogenated hydrocarbons and for mixtures this might be the case due to a volatile flammable component or due to the loss of a volatile non-flammable component.

AUH019: May form explosive peroxides

For substances and mixtures which may form explosive peroxides during storage, such as diethyl ether, 1,4-dioxan.

AUH044: Risk of explosion if heated under confinement

For substances and mixtures not classified as explosive but which may nevertheless display explosive properties in practice if heated under sufficient confinement. In particular, substances which decompose explosively if heated in a steel drum do not show this effect if heated in less-strong containers.

⁴ The additional six non-GHS physical hazard statements and six health hazard statements align with hazard statements that appeared in the National Occupational Health and Safety Commission's Approved Criteria for Classifying Hazardous Substances [NOHSC:1008(2004)], 3rd edition, 2004.

Human health hazard statements

AUH029: Contact with water liberates toxic gas

For substances and mixtures which in contact with water or damp air, evolve gases classified for acute toxicity in category 1, 2 or 3 in potentially dangerous amounts, such as aluminium phosphide, phosphorus pentasulphide.

AUH031: Contact with acids liberates toxic gas

For substances and mixtures which react with acids to evolve gases classified for acute toxicity in category 3 in dangerous amounts, such as sodium hypochlorite, barium polysulphide.

AUH032: Contact with acids liberates very toxic gas

For substances and mixtures which react with acids to evolve gases classified for acute toxicity in category 1 or 2 in dangerous amounts; such as salts of hydrogen cyanide, sodium azide.

AUH066: Repeated exposure may cause skin dryness or cracking

For substances and mixtures which may cause concern as a result of skin dryness, flaking or cracking but which do not meet the criteria for skin irritancy.

AUH070: Toxic by eye contact

For substances or mixtures where an eye irritation test has resulted in overt signs of systemic toxicity or mortality among the animals tested, which is likely to be attributed to absorption of the substance or mixture through the mucous membranes of the eye. The statement must also be applied if there is evidence in humans for systemic toxicity after eye contact.

The statement must also be applied where a substance or a mixture contains another substance labelled for this effect, if the concentration of this substance is equal to, or greater than 0.1 %.

AUH071: Corrosive to the respiratory tract

For substances and mixtures in addition to classification for inhalation toxicity, if data are available that indicate the mechanism of toxicity was corrosivity.

In addition to an appropriate acute toxicity symbol, a 'corrosion' symbol (similar to the 'corrosion' symbol used for skin and eye corrosivity) is added along with the hazard statement AUH071 Corrosive to the respiratory tract.

For substances and mixtures in addition to classification for skin corrosivity, if no acute inhalation test data are available and which may be inhaled.

GHS CATEGORIES WHICH ARE NON-MANDATORY UNDER THE WHS REGULATIONS

The labelling elements for the following GHS categories are not required for compliance with WHS Regulations in Australia. These may be required to meet overseas labelling requirements or, for environmental hazards, to meet environmental legislation in Australia.

HAZARDOUS TO THE AQUATIC ENVIRONMENT - ACUTE HAZARD

Hazard category 1	Signal word Warning	Hazard statement H400 Very toxic to aquatic life	Symbol Environment	
				
Precautionary statements				
Prevention	Response	Storage	Disposal	
P273 Avoid release to the environment. <i>- if this is not the intended use.</i>	P391 Collect spillage.		P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

HAZARDOUS TO THE AQUATIC ENVIRONMENT - LONG-TERM HAZARD

Symbol No symbol

Hazard category	Signal word	Hazard statement
3	<i>No signal word</i>	H412 Harmful to aquatic life with long lasting effects
4	<i>No signal word</i>	H413 May cause long lasting harmful effects to aquatic life

Precautionary statements			
Prevention	Response	Storage	Disposal
P273 Avoid release to the environment. - <i>if this is not the intended use.</i>			P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

HAZARDOUS TO THE OZONE LAYER

Symbol Exclamation mark

Hazard category	Signal word	Hazard statement
1	Warning	H420 Harms public health and the environment by destroying ozone in the upper atmosphere

Precautionary statements			
Prevention	Response	Storage	Disposal
			P502 Refer to manufacturer/supplier for information on recovery/recycling

FLAMMABLE GASES

Symbol <i>No symbol</i>

Hazard category	Signal word	Hazard statement
2	Warning	H221 Flammable gas

Precautionary statements			
Prevention	Response	Storage	Disposal
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition sources(s).	P377 Leaking gas fire: Do not extinguish, unless leak can be stopped safely. P381 Eliminate all ignition sources if safe to do so.	P403 Store in well-ventilated place.	

ACUTE TOXICITY - ORAL

Symbol <i>No symbol</i>

Hazard category	Signal word	Hazard statement
5	Warning	H303 May be harmful if swallowed

Precautionary statements			
Prevention	Response	Storage	Disposal
	P312 Call a POISON CENTER/doctor/physician if you feel unwell.		

ACUTE TOXICITY – DERMAL

Symbol
No symbol

Hazard category 5 **Signal word** Warning **Hazard statement** H313 May be harmful in contact with skin

Precautionary statements			
Prevention	Response	Storage	Disposal
	P312 Call a POISON CENTER or doctor/physician if you feel unwell.		

ACUTE TOXICITY - INHALATION

Symbol
No symbol

Hazard category 5 **Signal word** Warning **Hazard statement** H333 May be harmful if inhaled

Precautionary statements			
Prevention	Response	Storage	Disposal
	P304 + P312 IF INHALED: Call a POISON CENTER or doctor/physician if you feel unwell.		

SKIN CORROSION/IRRITATION

Symbol
No symbol

Hazard category 3 **Signal word** Warning **Hazard statement** H316 Causes mild skin irritation

Precautionary statements			
Prevention	Response	Storage	Disposal
	P332 + P313 If skin irritation occurs: Get medical advice/attention.		

SERIOUS EYE DAMAGE/IRRITATION

Symbol <i>No symbol</i>

Hazard category	Signal word	Hazard statement
2B	Warning	H320 Causes eye irritation

Precautionary statements			
Prevention	Response	Storage	Disposal
P264 Wash ... thoroughly after handling. ...Manufacturer/supplier or the competent authority to specify parts of the body to be washed after handling.	P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. P337 + P313 If eye irritation persists: Get medical advice/attention.		

ASPIRATION HAZARD

Symbol Health hazard

Hazard category	Signal word	Hazard statement
2	Warning	H305 May be harmful if swallowed and enters airways

Precautionary statements			
Prevention	Response	Storage	Disposal
	P301 + P310 IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. P331 Do NOT induce vomiting.	P405 Store locked up.	P501 Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified).

APPENDIX D – HAZARD PICTOGRAMS

The nine hazard pictograms that are representative of the physical, health and/or environmental hazards are shown below:

<u>Pictogram</u>	<u>Hazard</u>
	- Explosive
Exploding bomb	
	- Flammability
Flame	
	- Oxidising
Flame over circle	
	- Chronic Health hazards
Health hazard	
	- Environmental hazard
Environment	

<u>Pictogram</u>	<u>Hazard</u>
	- Gases under pressure
Gas cylinder	
	- Corrosive
Corrosion	
	- Acute toxicity
Skull and crossbones	
	- Certain health Hazards (e.g. sensitisers)
Exclamation mark	

Chronic health hazards include carcinogens, reproductive toxins, mutagenic, specific target organ toxicity, and aspiration hazard

APPENDIX E – COMPARISON OF HAZARD PICTOGRAMS WITH ADG CODE CLASS LABELS

The table below compares hazard pictograms from the GHS with the corresponding ADG Code class labels.

Hazard Pictograms	GHS Hazard	Dangerous Goods class labels (pictograms)	Dangerous goods classes
	Explosives Self-reactives Organic peroxides	   	Explosive
	Flammables Self-reactives Pyrophorics Self-heating Emits flammable gas on contact with water Organic peroxides	     	<ul style="list-style-type: none"> • Flammability (Liquid, Solid or Gas) • Pyrophoric, • Emits Flammable Gas • Organic Peroxide
	Oxidisers	 	<ul style="list-style-type: none"> • Oxidiser • Oxidising gas
	Gases under pressure		Non-toxic non-flammable gas
	Acute toxicity	 	<ul style="list-style-type: none"> • Acute toxicity • Acute Toxic gas
	Acute toxicity Skin irritation Eye irritation Skin sensitisers	No equivalent	

	Carcinogens Respiratory sensitizers Reproductive toxicity Target organ toxicity Germ cell mutagens	No equivalent	
	Eye corrosion Skin corrosion Corrosive to metal		Corrosive to Metals
	Aquatic toxicity. Not covered within the scope of workplace hazardous chemicals requirements		Environmental hazard
No equivalent hazard pictogram			Misc. Dangerous Goods
Not covered within the scope of workplace hazardous chemicals requirements			Infectious
Not covered within the scope of workplace hazardous chemicals requirements			Radioactive

APPENDIX F - PRECEDENCE RULES OF LABEL ELEMENTS

This appendix provides information on the rules of precedence of certain label elements, and general guidance for when redundant elements may be omitted from a label.

Duplication or redundancy of label elements may occur where a hazardous chemical meets the criteria for more than one hazard class or category. Duplication of an element may occur where:

- a specific precautionary statement applies to several hazard categories into which a particular chemical is classified; and/or
- an element may become redundant because a more stringent control applies to another hazard category (such as the type of PPE required).

Duplicate or redundant information should not be included on a label.

Multiple Hazards and Precedence of Hazard Information

Hazard Pictograms

The following rules apply for the use of hazard pictograms on a label:

- where a transport of dangerous goods class label (pictogram) is required on the container to meet transport regulations, the equivalent hazard pictogram, as specified in the GHS, should not appear; and
- if the skull and crossbones hazard pictogram applies, the exclamation mark hazard pictogram should not appear; and
- if the corrosive hazard pictogram applies, the exclamation mark hazard pictogram should not appear if it is used to communicate skin or eye irritation; and
- if the health hazard pictogram appears for respiratory sensitisation, the exclamation mark hazard pictogram should not appear if it is used to communicate skin sensitisation, or for skin or eye irritation.
- A cylinder of flammable and/or toxic gas should bear the hazard pictogram for 'Gases under pressure' in addition to the applicable dangerous goods class label/s.

Hazard Statements

Where hazard statements are required to be present on a label, then all of the assigned hazard statements must appear on the label.

Signal Words

Where the signal word 'Danger' applies, the signal word 'Warning' should not appear concomitantly.

Precautionary Statements

Where precautionary statements are required to be present on a label, then all assigned precautionary statements should appear on the label except where:

- the statement duplicates or conflicts with another statement or other hazard information that is required on the label; and
- omission of the statement would not decrease the level of protection or information in relation to the hazards.

Any conflict that arises between precautionary statements that are present on labels may be resolved by modifying the statements. However, the new statement(s) must give equivalent levels of information or protection.

Note: It is not mandatory to include information relating to environmental hazard categories on the label of a workplace hazardous chemical. However, this information should be included if a fully GHS-compliant label is desired.

Example of Where the Omission of a Precautionary Statement is Acceptable

An example where the omission of a precautionary statement on the label may be acceptable (and recommended) is where the use of personal protective equipment applies to different hazard categories for the same hazardous chemical.

For example, where the precautionary statements ‘wear face protection’ and ‘wear gloves and face protection’ are specified, then only the latter statement should appear on the label as it relates to the more stringent protective measures.

Example that Illustrates How Some of the Precedence Rules for Elements Should be Applied on Labels

In the following example, the chemical meets the criteria for Flammable liquid (category 2) and Skin sensitisation (category 1), as specified in the GHS.

The label that contains all of the elements required to meet the criteria for a substance or mixture that is classified as a flammable liquid (category 2) and skin sensitiser (category 1) is provided below. No precedence rules are applied:

	Flammable liquid (Category 2)	Skin sensitisation (Category 1)
<i>Signal word</i>	Danger	Warning
<i>Hazard statement</i>	Highly flammable liquid and vapour	May cause an allergic skin reaction
<i>Hazard Pictogram</i>		

<p><i>Precautionary Statements</i></p>	<ul style="list-style-type: none"> - Keep away from heat/sparks/open flames/hot surfaces.– No smoking. Manufacturer/supplier or the competent authority to specify applicable ignition source(s). - Keep container tightly closed. - Ground/Bond container and receiving equipment <ul style="list-style-type: none"> - <i>if electrostatically sensitive material is for reloading.</i> - <i>if product is volatile so as to generate hazardous atmosphere.</i> - Use explosion-proof electrical/ventilating/lighting/.../equipment. ... Manufacturer/supplier or the competent authority to specify other equipment. - Use only non-sparking tools. Take precautionary measures against static discharge. - Wear protective gloves/eye protection/face protection Manufacturer/supplier or the competent authority to specify type of equipment - IF ON SKIN (or hair): Remove/take off immediately all contaminated clothing. - Rinse skin with water/shower. - In case of fire: Use ... for extinction. ...Manufacturer/supplier or the competent authority to specify appropriate media - <i>if water increases risk.</i> - Store in a well-ventilated place. - Keep cool. - Dispose of contents/container to ... in accordance with local/regional/national/international Regulations (to be specified).. 	<ul style="list-style-type: none"> - Avoid breathing dust/fume/gas/mist/vapours/spray. Manufacturer/supplier or the competent authority to specify applicable conditions. - Contaminated work clothing should not be allowed out of the workplace. - Wear protective gloves. Manufacturer/supplier or the competent authority to specify type of equipment. - IF ON SKIN: Wash with plenty of soap and water. - If skin irritation or rash occurs: Get medical advice/attention. - Specific treatment (see ... on this label) ... Reference to supplemental first aid instruction. - <i>Manufacturer/supplier or the competent authority may specify a cleansing agent if appropriate.</i> - Wash contaminated clothing before reuse. - Dispose of contents/container to... ... in accordance with local/regional/national/international Regulations (to be specified)..
<p>According to the precedence rules described above, the following elements should be omitted from the label:</p> <ul style="list-style-type: none"> • The signal word 'Warning' because 'Danger' applies. 		

- The precautionary statement ‘wear protective gloves...’ because the statement ‘Wear protective gloves and eye protection/face protection...’ also applies, and therefore, provides for more stringent PPE controls.
- The statement ‘Dispose of contents/container to...’ as this is duplicated and should only appear on the label once.

The following precautionary statements refer to similar controls and may be combined to aid comprehensibility and to save label space:

IF ON SKIN (or hair): Remove/take off immediately all contaminated clothing

IF ON SKIN: Wash with plenty of soap and water

These statements could be combined to read:

IF ON SKIN (or hair): Remove/take off immediately all contaminated clothing and wash skin (or hair) with plenty of soap and water.

The label elements that apply to a flammable liquid (category 2) and skin sensitiser (category 1) with the precedence rules applied are:

<i>Signal word</i>	Danger
<i>Hazard statement</i>	Highly flammable liquid and vapour May cause an allergic skin reaction
<i>Hazard Pictogram</i>	
<i>Precautionary Statements</i>	<ul style="list-style-type: none"> - Keep container tightly closed. - Keep away from heat/sparks/open flame/hot surfaces – No smoking. ...Manufacturer/supplier or the competent authority to specify applicable ignition source(s). - Ground/Bond container and receiving equipment. - <i>if electrostatically sensitive material is for reloading.</i> - <i>if product is as volatile as to generate hazardous atmosphere:</i> - Use explosion-proof electrical/ventilating/lighting/.../equipment. ... Manufacturer/supplier or the competent authority to specify other equipment. - Use only non-sparking tools. - Take precautionary measures against static discharge. - Wear protective gloves and eye protection/face protection Manufacturer/supplier or the competent authority to specify type of equipment. - Avoid breathing dust/fume/gas/mist/vapours/spray. Manufacturer/supplier or the competent authority to specify applicable conditions. - Contaminated work clothing should not be allowed out of the workplace. - In case of fire: Use ... for extinction.

Draft

APPENDIX G - CHECKLIST FOR PREPARATION OF A LABEL

The following table lists the steps that are recommended for the preparation of a label for hazardous chemical. The information is intended for use as a quick reference guide. It may not apply to all situations. The relevant sections of this Code should be referred to for full details of the labelling requirements.

Step		Comments/Reference information
1	Select the suitable product identifier.	
2	Determine which ingredients require disclosure.	Refer to Subsection 0 for ingredient disclosure requirements.
3	Select the label elements which apply to classification endpoints or hazard categories, in accordance with correct hazard classification	Label elements applicable to all hazard categories are tabulated in Appendix C.
4	Combine all applicable elements, and then determine which elements may be omitted from the label to avoid duplication or redundancy.	Refer to Appendix F for precedence rules and hierarchy of elements.
5	Determine which label elements may be omitted where a special labelling situation may apply.	Refer to Chapter 0.
6	Determine whether other relevant health and safety information may be required.	Particularly important for hazard endpoints not covered by the GHS, such as miscellaneous dangerous goods not otherwise classifiable.
7	Select the appropriate supplier details to be included.	Other information, such as web address or emergency contact phone number, may be included.
8	Determine whether an expiry date is required.	Expiry date is required if degradation over time could change the hazard classification. For example, if a highly toxic impurity is formed.
9	Identify any other relevant information that may be required.	For example, reference to SDS or product use information.
10	Design the label layout and grouping of information.	Refer to Chapter 4.

APPENDIX H - EXAMPLE LABELS

This appendix contains example labels that have been produced in accordance with the labelling system described in this Code. Examples 1-4 are prepared for a hypothetical hazardous mixture, *Flammosol*. *Flammosol* contains 95% hydrocarbon solvent and 5% toxicole and is classified as a flammable liquid (category 2), acute toxicity – oral (category 3) and skin corrosion/irritation (category 2).

Example 1: *Flammosol* label containing the full set of labelling information (it is assumed that flammasol is a technical name and is not a trade name).

The general precautionary statements 'Read label before use' and 'Keep out of reach of children' have been included. Inclusion of these statements is not mandatory. In accordance with precedence rules described in Appendix F, the exclamation mark hazard pictogram and 'Warning' signal word have been omitted and duplicate precautionary statements have not been included.

Read label before use. Keep out of reach of children	
FLAMMABLE LIQUID, TOXIC N.O.S	
(Flammosol)	
UN 1992	
Contains: Hydrocarbon solvent 95% Toxicole 5%	
	
DANGER	
Highly flammable liquid and vapour Toxic if swallowed Causes skin irritation	
IF ON SKIN (or hair): Take off contaminated clothing and wash before re-use. Rinse skin using plenty of soap and water.	In case of fire: Use powder for extinction.
If skin irritation occurs: Get medical advice/attention.	Keep away from sparks and open flames. – No smoking.
IF SWALLOWED: Immediately call a POISON CENTRE or doctor/physician. Rinse mouth.	Keep container tightly closed.
Store locked up in a well-ventilated place. Keep cool.	Ground/bond container and receiving equipment.
Dispose of contents/container in accordance with State regulations. Refer to the Safety Data Sheet before use.	Use explosion-proof electrical equipment. Use only non-sparking tools. Take precautionary measures against static discharge.
Madeup Chemical Company, 999 Chemical Street, Chemical Town, My State. Telephone: 1200 000 000 www.madeup-chemical-company.com.au	Wear protective gloves and eye and face protection. Wash hands thoroughly after handling. Do not eat, drink or smoke when using this product.

Example 2: *Flammosol* label containing the full set of labelling information using 2 separate panels

Front panel

Read label before use. Keep out of reach of children

FLAMMABLE LIQUID, TOXIC N.O.S

(Flammosol)

UN 1992

Contains:

Hydrocarbon solvent 95%

Toxicole 5%

DANGER

Highly flammable liquid and vapour

Toxic if swallowed

Causes skin irritation

Madeup Chemical Company, 999 Chemical Street, Chemical Town, My State. Telephone: 1300 000 000

www.madeup-chemical-company.com.au

Back panel

IF ON SKIN (or hair): Take off contaminated clothing and wash before re-use.

Rinse skin using plenty of soap and water.

If skin irritation occurs: Get medical advice/attention.

IF SWALLOWED: Immediately call a POISON CENTRE or doctor/physician.

Rinse mouth.

In case of fire: Use powder for extinction.

Keep away from sparks and open flames. – No smoking.

Keep container tightly closed.

Ground/bond container and receiving equipment.

Use explosion-proof electrical equipment.

Use only non-sparking tools.

Take precautionary measures against static discharge.

Wear protective gloves and eye and face protection.

Wash hands thoroughly after handling.

Do not eat, drink or smoke when using this product.

Store locked up in a well-ventilated place. Keep cool.

Dispose of contents/container in accordance with State Regulations.

Refer to the Safety Data Sheet before use.

Example 3: *Flammosol* label that meets both transport and workplace labelling requirements (single container)

The equivalent dangerous goods (transport) classification for *Flammosol* is a class 3 (flammable liquid, packing group II) and a class 6.1 (oral toxicity, packing group III).

The transport markings should be in the most prominent position on the container and should be clearly distinguishable from the workplace labelling.

Hazard pictograms are not included on the workplace label panel as the equivalent class labels appear on the transport panel.

Transport markings label portion (to comply with transport Regulations)

Example 4: *Flammosol* labels that are appropriate for small containers

The amount of information included on the label of a small container will vary, and be dependent on the size and shape of the container; and the number of label elements to be included, particularly where the hazardous chemical meets the criteria for multiple hazard classes. As a mandatory minimum, small containers must be labelled with the product identifier and supplier information and hazard pictograms or hazard statements. Labels for small containers or packages must include as much labelling information as reasonably practicable

Example 4 (i):

This example contains the minimum labelling information permitted and a reference to the safety data sheet.

Example 4 (ii):

This label has sufficient room to include additional labelling information. Following the guidance provided in Appendix F, hazard statements, the identity and proportions of the hazardous ingredients, critical first aid instructions and reference to the safety data sheet have been included.

Example 5: Example labels for hazardous waste

Example 5 (i): Hazardous Waste label that meets both transport and workplace labelling requirements (single container)

Selected precautionary statements relating to first aid instructions, accident prevention and personal protective equipment and disposal advice have been included. Hazard pictograms

have not been included as the corresponding transport class labels already appear. Note: it is assumed that 'Flammable waste' is an acceptable technical name'

FLAMMABLE LIQUID, TOXIC

N.O.S

(Flammable waste)

UN 1992

Contains
Mixed flammable solvents (90%)
Alkyl tin (5%)

Flammable liquid and vapour
Toxic if swallowed

IF SWALLOWED: Immediately call a POISON CENTRE or doctor/physician.

Keep away from ignitions sources. – No smoking.
In case of fire: Use powder for extinction.
Wear protective gloves, eye and face protection.

Dispose of contents in accordance with State Regulations

Madeup Chemical Company, 999 Chemical Street, Chemical Town,
My State. Telephone: 1300 000 000
www.madeup-chemical-company.com.au

Example 5 (ii): Hazardous Waste label that meets workplace labelling requirements and transport inner-packaging requirements

The main differences between this and the previous example are that hazard pictograms are used and the proper shipping name and UN number are not included.

Flammable waste

Contains
Mixed flammable solvents (90%)
Alkyl tin (5%)

Flammable liquid and vapour
Toxic if swallowed

IF SWALLOWED: Immediately call a POISON CENTRE or doctor/physician.

Keep away from ignitions sources. – No smoking.
In case of fire: Use powder for extinction.
Wear protective gloves/eye protection/face protection.

Dispose of contents in accordance with State Regulations

Madeup Chemical Company, 999 Chemical Street, Chemical Town, My State.
Telephone: 1300 000 000
www.madeup-chemical-company.com.au

Example 5 (iii): Labelling of hydrochloric acid waste

Hydrochloric acid waste

**May be corrosive to metals
Causes serious eye damage**

Wear eye/face protection
IF IN EYES: Rinse cautiously with water for several minutes.
Remove contact lenses, if present and easy to do so. Continue rinsing.
Immediately call a POISON CENTRE or doctor/physician.

Madeup Chemical Company, 999 Chemical Street, Chemical Town, My State. Telephone:
1300 000 000
www.madeup-chemical-company.com.au

Example 6: Example labels for research chemicals

Example 6 (i):

In this example, the chemical identity and some of the hazardous properties are known, and are therefore, included on the label.

Example 6 (ii):

In this example, the identity of the chemical is known. However, the hazardous properties have not been determined.

Example 6 (iii):

In the following example, neither the identity nor the hazardous properties of the substance are known.

Example 7: Example labels for miscellaneous dangerous goods not otherwise classifiable under the GHS.

The following two example labels are for carbon dioxide (dry ice). Dry ice does not meet any of the hazard categories of the GHS, and therefore can not be assigned any label elements. However, dry ice is a miscellaneous dangerous goods and other health and safety information is required.

Example 7 (i): Hazardous Waste label that meets transport labelling requirements

This label also includes other health and safety information that are applicable to its workplace storage, handling and use, and therefore, also meets the workplace labelling requirements.

Carbon dioxide, solid (dry ice)

UN 1845

Asphyxiation hazard:
Use only in well ventilated area
Wear gloves and eye protection

Madeup Chemical Company, 999 Chemical Street,
Chemical Town, My State. Telephone: 1300 000 000

Example 7 (ii):

The following label is designed to meet the workplace labelling requirements only.

No hazard pictograms or class labels are present. However, health and safety information relating to storage, handling and use in the workplace is included.

Dry Ice (solid CO₂)

Asphyxiation hazard:
Use only in well ventilated area
Wear gloves and eye protection

Madeup Chemical Company, 999 Chemical Street,
Chemical Town, My State. Telephone: 1300 000 000
